

# Turnip

## Team 2 - Project Charter

Abigail Alderson, Cole Johnson, Keegan Irby, Kevin Cardona, Kyle Pollina

### PROBLEM STATEMENT

There are no long lasting memories of parties or events. People want a way to revisit great experiences.

### PROJECT OBJECTIVES

- Create a platform sending and accepting event invites.
- Inform invitees of event specifics.
- Allow invitees to post photos, videos, and text updates during the event.
- Enable users to harvest memories from all the photos and videos that invitees posted during the event.
- Allow users to look back at past events' memory harvests.

### STAKEHOLDERS

- Users: For the scope of this project, target users are college-aged kids who attend parties and events.
- Developers: Abigail Alderson, Cole Johnson, Keegan Irby, Kevin Cardona, Kyle Pollina
- Project Manager: Cole Johnson
- Project Owner: Abigail Alderson, Cole Johnson, Keegan Irby, Kevin Cardona, Kyle Pollina

### PROJECT DELIVERABLES

- A backend server application that manages users and media that serves to the frontend application.
- A frontend application that sends and receives information to and from the backend.
- Time permitting: a text message service that lets approved users upload media (photos, videos, text updates) to the event page.
